PRELIMINARY PROGRAM

Dear Friends,

the common interest for the minimally invasive surgery inspired us to analyse techniques and indications coming from video-assisted and robot-assisted surgery in order to evaluate advantages and disadvantages to agree upon common criteria. Our first aim is to validate the choice of using the minimally invasive technique for the pathology to be treated; the second is to compare the two techniques and give clear indications on which choose or prefer between them.

The high cost surgery must be analysed very carefully in order to provide a correct indication through the following evaluations: patient's benefit, sustainability of procedure and surgeon's advantage.

The collaboration between the organizers, in a "spending review" era, bring us together in order to not singularly weigh on companies that support events concerning the same field.

Our interest is the general surgery and we have chosen most frequent topics in our clinical practice.

Short video regarding surgical operations performed with two different techniques compared will be showed and the chairman will interrogate panelists and shooters at the end of each video.

We have chosen Naples for this first joint event and we hope to welcome you as well as possible.

We will be waiting you!
